Dhruv Garg

AI Engineer | AI Automation | Generative AI

Delhi, India | +91 9310728606 | dhruvgarg1107@gmail.com | linkedin.com/in/dhruv-garg-449996244

PROFESSIONAL SUMMARY

AI & ML undergraduate (CGPA 8.52) who builds AI agents and workflow automation that replace manual work. At Magppie, automated sales calls with a voice AI agent and automated first-draft kitchen design.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML, CSS
AI / ML: Generative AI, LLMs, AI Agents, Conversational AI, Voice AI, Prompt Engineering, NLP, Machine Learning
Automation: Workflow Automation, API Integration, REST APIs, WebSockets, CI/CD
Libraries: NumPy, Pandas, Matplotlib, Scikit-learn, TensorFlow, Keras, OpenCV
Web: Node.js, Express, FastAPI, Next.js, React, Three.js
Databases: PostgreSQL, Redis, Supabase
Tools: OpenAI API, Gemini API, Claude Code, ChatGPT, Git, GitHub, Docker, Vercel

EXPERIENCE

Artificial Intelligence Intern | Magppie Wellness Kitchen *Jun 2026 – Present*

AI Voice Sales Agent *Python, FastAPI, WebSockets, OpenAI API, Zoho CRM*

- Built and deployed a conversational voice AI agent that automates Magppie sales calls in English and Hindi: it qualifies leads, answers only from the company knowledge base and pulls lead details from Zoho CRM.
- Integrated the full call pipeline through APIs: telephony, noise removal, speech-to-text, LLM response and streaming text-to-speech.
- Reduced reply time to about 1.5 seconds (640 ms at best) by streaming replies sentence by sentence, sending a backup request when the LLM is slow, and caching 98–99% of the prompt; about Rs 0.6 per reply.
- Made calls sound natural by handling interruptions, background noise, speakerphone echo, unfinished sentences and switching between Hindi and English mid-call.
- Kept answers accurate by correcting misheard brand names and never altering prices; added caller memory across calls, daily spend limits and 12 automated test suites running in CI (GitHub Actions).

Kitchen Layout Planner *Node.js, JavaScript, Three.js, Gemini API, Supabase, Vercel*

- Automated the first-draft kitchen design process: the planner turns a designer's room drawing into a complete cabinet layout from the company catalogue, cutting initial layout time by about 50%.
- Designed the layout engine: dynamic programming fits exact cabinet widths on each wall, and a search compares corner arrangements and small appliance moves to pick the best design.
- Converted the design team's know-how into 100+ design rules (safety gaps, corner fillers, appliance placement), with a plain-language log explaining every design decision.
- Delivered a full web app with 2D plans and elevations, an interactive 3D view, automatic pricing with quote PDFs and photorealistic AI renders.
- Deployed it to the cloud with secure login, private data per designer, saved design versions and client share links; protected by 280+ automated tests.

Research Intern | National Internet Exchange of India (NIXI) *Oct 2025 – Jan 2026*

- Researched blockchain-assisted settlement mechanisms for Internet exchanges and DNSSEC validation.
- Analysed Internet infrastructure technologies for secure, scalable and reliable network operations.

PROJECTS

AI Personal Finance Advisor *Python, Scikit-learn, Next.js, PostgreSQL, Redis, Docker*

- Trained a Linear SVM classifier (Scikit-learn, TF-IDF) on 16,000 bank transactions; it reaches 83.6% accuracy on unseen merchants, compared with 50.5% for keyword rules.
- Added a human-in-the-loop review queue for low-confidence predictions (92.1% accuracy on auto-accepted transactions) and retraining from user corrections, served as a FastAPI microservice.
- Built an LLM advisor (Llama 3.3 70B) that explains figures calculated in SQL, so it never invents numbers, with validated JSON output and automatic model fallback.

EDUCATION

Akhilesh Das Gupta Institute of Professional Studies, Delhi *Expected Jul 2027*
BTech in Artificial Intelligence & Machine Learning | CGPA 8.52

New Green Field School, Delhi *Apr 2023*
Class XII: 85.2% | Class X: 94%
